WORK 4 YOU

Many countries, including Italy, are facing a marked shortage of medical and nursing staff, as well as healthcare technicians. In this context, the **WORK 4 YOU** project stands as an innovative and dynamic solution, perfectly in line with the globalization of the healthcare system. Its goal is to simplify bureaucratic processes, thus facilitating access for healthcare professionals to the labour market and responding promptly to local needs in a global context.

WORK 4 YOU is committed to identifying and meeting the specific demands of the labour market, offering an effective and timely response to the varied needs of the industry, thanks to the expansion of operational teams and collaboration with brokerage companies.

 Currently, the NHS (National Health System) in the UK faces a shortage of more than 250,000 jobs, which is expected to increase further in the coming years. This shortage of staff, which could lead to a rise in wages due to competition between health service providers, is the result of several factors: the increasing number of retirements of nurses, the elimination of internship scholarships by the NHS and economic and social influences such as the banking crisis and Brexit.

For those who see Brexit as a challenge, Fenicia Events & Communication is a reliable point of reference.

In recent years, the NHS has undertaken a process of research and selection of qualified personnel abroad, first at European level, then globally in order to fill vacancies.

WORK 4 YOU

The procedures in which we propose assistance are:

- recognition of qualifications
- language training
- the search for vacancies where to allocate the different professional profiles
- assistance in the integration phases by promoting and encouraging the development of local communities of staff from a single country
- assistance in the registration to the main organs: *examples are the HCPC (Healthcare Profession Council - regulatory body and equivalent of the professional order) and the Society of Radiographers (consultative body and union responsible for establishing new standards of clinical practice) in England.*

The main goal of our project is to develop and implement a brokerage services program dedicated to the search for highly qualified and competent personnel, together with the support of expert consultants in the field, to ensure that all needs are met in an effective and targeted manner.
